Signs of Worms are: Constipation, deranged stomach, swollen upper lip, offensive breath, hard and full stomach with pains, pale face, eyes heavy, short dry cough, grinding of the teeth, little red points on the tongue, starting during sleep with troublesome dreams, slow fever.

## After Reading Some Of My Stuff

My friends jokingly tell me that I could make more money writing ads than I can running a repair shop. Now this ad writing is no joke, but I am not so sure but perhaps my friends are right, because if I got as much out of this ad writing as it costs me to get them printed, that will be some income.

Of course we never have done much repairing along these lines, but if you have some Crooked, Bent or Broken Down Ads, Sermons, Public Speeches, After-Dinner Talks, or anything along that line that aren't working right, bring them in, we have repaired darn near everything else and perhaps we can get them into running order.

Just now, we are repairing Auto Bodies, Fenders, Frames, etc., and installing some auto glass.

**John Deere Farm Tractor**

Now is the time when you want a dependable and economical tractor for your belt-work jobs.

Threshing, baling, grinding feed, shelling, filling silo, sawing wood, shredding — these are some of the important jobs that you'll do more economically with the John Deere.

With a John Deere on the power end of the belt you are assured of ample, smooth-running power to handle them all. No matter how sudden or how heavy the demand thrown upon it, the sensitive governor responds

instantly to the power load.

There's no loss of power between the engine and the belt on the John Deere. Belt pulley is mounted on the crankshaft, where it delivers every available ounce of engine power to the belt. Belt pulley is on the right side of the tractor in plain view of the operator running in the right direction for a crossed belt.

Of simple, sturdy construction — with fewer wearing parts — the John Deere Tractor stands supreme for economical power at belt, drawbar, or power take-off.
